Captain W. G. Hazul, president of the Mexican National railroad, has been interviewed by a reporter for the Atlanta Constitution, and among many other things of importance to our people, the Captain is reported as saying:

"I have come to the conclusion that in the present state of affairs in the United States, the issue is clearly drawn. Silver is the money of the people, and gold is the money of the corporations. The gold standard will kill the farmer and destroy all hope for him, but it is the life of the corporation. Silver is the money of the people, the money of the farmers and small traders. Under a silver basis the people of the country will prosper, but the corporations will be hurt. I have changed my views on the money question. You will recollect that less than a year ago in a conversation I had with you, I expressed myself strongly against the free coinage of silver, and in favor of the gold standard. Well, I have been in Mexico since, and have had an object lesson in the management of the road of which I am president. Although the road is forced to pay its interest and fixed charges at two to one, the exchange price of silver for gold, yet it has made money through the enhanced business done."
